Overview

This estimate is based on Watford AeroService's current training rates and typical flight training experience under FAA Part 61. The FAA requires 250 total flight hours for a Commercial Pilot Certificate (Airplane Single-Engine Land). Most candidates already hold a Private Pilot Certificate and Instrument Rating when they begin commercial training, so the incremental cost is typically for the required dual training, complex/TAA time, and any remaining hours needed to reach 250. National averages for the commercial certificate (after private + instrument) commonly fall in the $10,000–$25,000 range depending on hours already logged.

Our Training Rates

Item	Rate	Notes
Certified Flight Instructor (CFI)	$60 / hour	Dual flight + ground instruction
Airplane Rental	$95 / hour	Dry rate
Fuel	$50 / hour	Approximate fuel cost
Dual Flight (CFI + Aircraft + Fuel)	$205 / hour	Typical dual lesson rate
Solo Flight (Aircraft + Fuel)	$145 / hour	After solo endorsement

FAA Minimum Requirements (Part 61)

• Minimum age: 18

• Hold at least a Private Pilot Certificate

• Second-class medical certificate (or first-class for some operations)

• 250 hours total flight time, including:

– 100 hours in powered aircraft (50 in airplanes)

– 100 hours PIC (50 in airplanes, 50 cross-country)

– 20 hours of dual training, including 10 hours instrument and 10 hours in a complex, turbine, or TAA airplane

– Specific day and night cross-country dual flights

– 10 hours of solo flight time meeting commercial requirements

• Pass the FAA Commercial Airplane knowledge test

• Pass the practical test (checkride) with a Designated Pilot Examiner

Note: Most candidates arrive with 150–220 hours already logged from private and instrument training. The remaining hours are a mix of dual commercial training and solo time building.

Estimated Cost Scenarios

The following scenarios assume the candidate already holds a Private Pilot Certificate and Instrument Rating. Dual hours cover commercial maneuvers, required cross-countries, and checkride preparation. Solo hours cover remaining time building to 250 total hours.

Scenario	Dual Hrs	Solo Hrs	Flight Cost
Already near 250 hrs	20	10	$5,550
Typical / Realistic	25	40	$10,925
Conservative (lower starting hrs)	30	60	$14,850

Example: Realistic path ≈ 25 dual hours × $205 + 40 solo hours × $145 = **$10,925** in flight training.

Additional Typical Costs

Item	Estimated Cost	Notes
Second-Class Medical	$100 – $200	Required for commercial privileges
FAA Knowledge Test	$175	Commercial Airplane written exam
Checkride (DPE Fee)	$700 – $1,200	Practical test
Study Materials / Ground School	$200 – $500	Books, online course
Complex / TAA Checkout (if needed)	$0 – $500	Depends on aircraft available
Typical Additional Total	$1,200 – $2,500	Varies by choices

All-in estimate (flight + additional): Roughly $12,000 – $17,000 for a typical path at our rates after private and instrument. Candidates who still need substantial time building will see higher totals. National averages are often higher due to aircraft and instructor rates.

Typical Timeline

Timeline depends heavily on hours already logged and how consistently the candidate flies. Dual commercial training is usually completed in a focused block.

Starting Point	Typical Calendar Time
Already near 250 hours	1–2 months
150–200 hours (typical after PPL + IR)	3–6 months
Under 150 hours	6–12 months

Most candidates complete commercial training in 3–6 months while working. Weather, aircraft availability, and personal schedule also affect the timeline.
