Overview

This estimate is based on Watford AeroService's current training rates and typical flight training experience under FAA Part 61. The FAA requires 40 hours of actual or simulated instrument time (of which at least 15 must be with a CFII) plus 50 hours of cross-country PIC time. Most pilots complete the rating in 45–65 instrument hours. National averages typically fall in the $8,000–$15,000 range depending on existing cross-country time, simulator use, and training frequency.

Our Training Rates

Item	Rate	Notes
Certified Flight Instructor (CFI)	$60 / hour	Dual flight + ground instruction
Airplane Rental	$95 / hour	Dry rate
Fuel	$50 / hour	Approximate fuel cost
Dual Flight (CFI + Aircraft + Fuel)	$205 / hour	Typical dual lesson rate
Solo Flight (Aircraft + Fuel)	$145 / hour	After solo endorsement

FAA Minimum Requirements (Part 61)

• Hold at least a Private Pilot Certificate (Airplane)

• 50 hours cross-country time as PIC (at least 10 in an airplane)

• 40 hours actual or simulated instrument time, including:

– At least 15 hours dual with a CFII

– One 250 NM IFR cross-country with three different approaches

– 3 hours of instrument training within 2 calendar months of the checkride

• Pass the FAA Instrument Airplane knowledge test

• Pass the practical test (checkride) with a Designated Pilot Examiner

Note: Most pilots need more than the 40-hour instrument minimum. Industry data shows typical completion between 45 and 65 instrument hours. Up to 20 hours may be logged in an approved simulator.

Estimated Cost Scenarios

The following scenarios use our rates and assume the pilot already holds most of the 50-hour PIC cross-country requirement. Dual hours include flight and ground instruction. Safety pilot / solo instrument hours are billed at the aircraft + fuel rate.

Scenario	Dual Hrs	Safety Pilot Hrs	Total Inst. Hrs	Flight Cost
FAA Minimum	15	25	40	$7,700

Typical / Realistic	30	25	55	$9,775
Conservative	35	30	65	$11,525

Example: Realistic 55-hour path ≈ 30 dual hours × $205 + 25 safety pilot hours × $145 = **$9,775** in flight training.

Additional Typical Costs

Item	Estimated Cost	Notes
FAA Knowledge Test	$175	Instrument Airplane written exam
Checkride (DPE Fee)	$700 – $1,200	Practical test
Study Materials / Ground School	$200 – $500	Books, online course, charts
IFR Charts & Approach Plates	$50 – $150	Current publications
Typical Additional Total	$1,100 – $2,000	Varies by choices

All-in estimate (flight + additional): Roughly $11,000 – $13,500 for a realistic path at our rates. Pilots who still need significant cross-country PIC time will see higher totals. National averages are often higher due to aircraft and instructor rates.

Typical Timeline

Training frequency is the biggest driver of both total hours and calendar time. Consistent flying reduces skill fade and usually lowers overall cost.

Training Frequency	Typical Instrument Hours	Calendar Time
4–5 flights / week (intensive)	40–50	2–3 months
3 flights / week	45–55	3–5 months
2 flights / week	50–60	5–8 months
1 flight / week or irregular	55–70+	8–14+ months

Most pilots training part-time while working complete their instrument rating in 4–10 months. Weather, aircraft availability, and personal schedule also affect the timeline.

Sources & Notes

FAA Part 61.65 (instrument rating requirements). Industry averages drawn from AOPA training resources, flightschoolcost.com, and other 2025–2026 published estimates. Most pilots finish between 45 and 65 instrument hours.

Disclaimer: This is an estimate for planning purposes only. Actual costs depend on the student's progress, weather delays, aircraft availability, and individual learning pace. Rates are subject to change. Contact Watford AeroService for a personalized training plan and current pricing.
